

## Workshop I

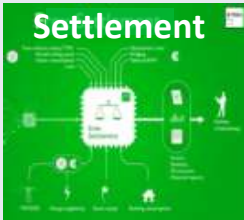

How to meet the new European standards

**Bart Van der Spiegel**  
Energy Management

31<sup>st</sup> May 2017

	Directive / TSI	Standardisation
	<p><b>11/2014: CR 1302/2014</b> Art. 3: Mandatory on new, upgraded and renewed vehicles</p> <p><b>LOC&amp;PAS TSI</b> Art. 4.2.8.2.8</p>	<p><b>EN 50463:2012</b> No important changes in EN 50463:2017 on EMS</p>
	<p><b>Open point</b> 10/2014: RfS &gt; CENELEC 10/2016: Report to RISC 01/2018: Voting on RISC</p>	<p><b>EN 50463:2017</b> 03/2017: Positive vote of all NC's 07/2017: Available at all NC's 01/2018: EN 50463:2012 withdrawn</p>
	<p><b>11/2014: CR 1301/2014</b> Art. 9: Two years after closing open point</p> <p><b>ENE TSI</b> Art. 7.2.4</p>	<p><b>EN 50463:2012</b> Adjusted in EN 50463:2017</p>
	<p><b>11/2014: CR 1301/2014</b> Art. 9: Two years after closing open point. Able to exchange, validate and allocate. Taking into account legislation energy market.</p>	<p><b>UIC 930</b> Revision has started. UIC Members can still join project 2018/ENV/568 (request your UIC-contact to show interest)</p>

**UIC members have to  
indicate interest to join  
project 2018/ENV/568**

## Updating UIC leaflet 930

- Small improvement to existing UTILTS data exchanges
- Updating of border crossings points and polygons around networks.
- Updating the role model:
  - What are different actors?
  - What are tasks and responsibilities of these actors?
- Validation, estimation and allocation:
  - Should we standardise these activities?
- XML exchanges:
  - What exchanges should get standardised?
  - Can we reuse XSD's from EMS to DCS?

## Case studies

### **13:05 ÖBBs' case**

Michael Bares, ÖBB

### **13:15 What's next for Energy Metering**

Roberto Bonomi, Ciesse

### **13:25 Conformity assessment**

John Hegarty, SBB

### **13:40 Standardization work in Finland at FTA**

Rami Huovinen & Iiris Saarenpää

## Discussion topics (13:55 to 14:25)

- **Conformity assessment**
  - ☐ What are the roles of the different stakeholders in the conformity assessment process? Who should do what?
  - ☐ How could the conformity assessment be simplified and so reduce costs?
  - ☐ Which specific questions regarding EMS conformity still need to be clarified?
- **Recalibration and reverification**
  - ☐ What is requested by the suppliers? Are these requirements accepted by Notified Bodies? Do they request extra tests?
  - ☐ Do the suppliers offer tools to be able to recalibrate a sensor? Who has already experience with this?
- **Regulatory and standardisation framework**
  - ☐ What is not yet sufficiently specified?
  - ☐ Who should offer services using the data from the Reading Block or real time measurements? EMS suppliers? Independent software companies? Eress?

- Call for sponsors and speakers is open
- Focus on digitalisation and data security
- Invitation to RU, IM, industry, associations and universities
- Overview on legislation, standardisation, research and applications
- Applications related to passengers information, traffic management, driving advisory systems, automatic train operations, energy metering, maintenance, security of legal data and video surveillance.
